

ColorHues™ Unicorn

INSTRUCTIONS

Here we have a cool little project that requires a bit of modification to ensure it all fits together properly.

We used 1/8" ColorHues Wisteria for this and it looks great!

1. Before starting, get a good measurement of the thickness of the plastic materials you're using and regap the slider slots if necessary. Our file uses a .11" gap to fit the plastic sheet materials we used.
2. Insert material into the laser bed. Use the focus tool to adjust to the top of the material. Focusing should be done each with a new material.
3. Import your design and adjust power and speed settings.
4. Mask both sides so the laser doesn't char it when cutting.
5. Cut the material, knock out the pieces and assemble.

Remember that it's just plastic and to not force the pieces together.

And there you have it! Unicorns ARE real!
