OKI Pro8432WT

Now Supporting Black & White Swapping

The **OKI Pro8432WT** now offers the ability to switch between printing with white toner or black toner, allowing the same printer to cost effectively produce stunning full-color and true black on light substrates or full-color and true white on dark substrates.

Benefits of Black/White Swapping

- Black toner expands use of 8432WT
- One printer to cost effectively produce DARK and LIGHT shirts
- Cost savings: lower printing costs for dark colors and black objects
 - Black toner delivers true black at lower costs
 - Use K in place of CMY (composite black)
 - Black (K) toner costs less than using CMY toner

BLACK TONER DELIVERS TRUE BLACK *at Lower Costs*

With Black installed in place of White, you can produce rich blacks (CMY+K) for transfers onto light materials or use true black to produce sharp text and graphics. Furthermore, using black toner can be a cost savings compared to mixing Cyan, Magenta and Yellow to represent black.

Composite Black - CMY Toner

True Black - Black (K) Toner

HOW TO GET STARTED

All Pro8432WT printers can be updated to swap between using Black toner in place of White. To begin using Black toner in the Pro8432WT you simply need to:

1. Purchase a new Black toner and Image Drum for the Pro8432WT. Additional instructions are included.
2. Download and install new color and media profiles. This is a onetime process for existing owners.
3. Begin printing jobs with black toner by setting the Pro8432WT print properties (printer driver) to use the profiles that incorporate black toner.

Use the following URL to download the utilities to install new color profiles and custom media files for using black toner on the Pro8432WT.
